

1. Pick a Project

We shall use an open source project to practice cloning a git repository. If you have everything in place, you can even play this game!

①

Let's visit this project

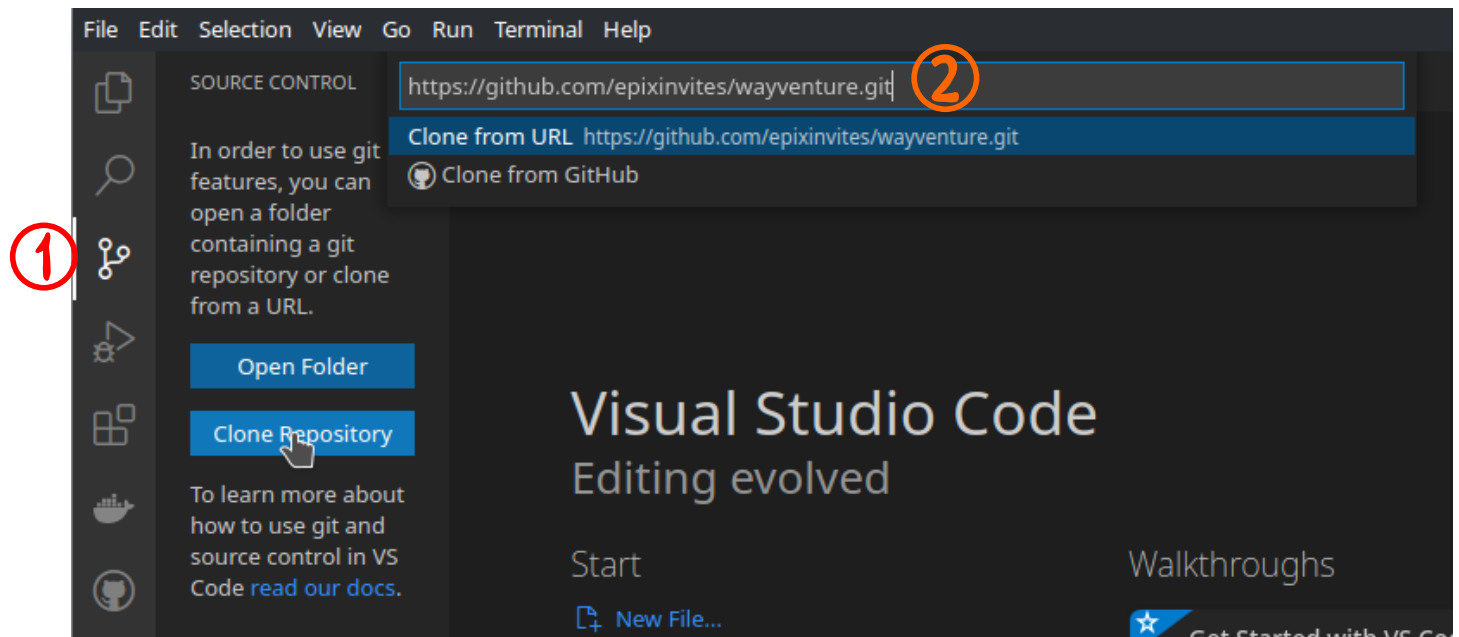

<https://github.com/epixinvites/wayventure>

②

Click on Code, and copy the URL from HTTPS

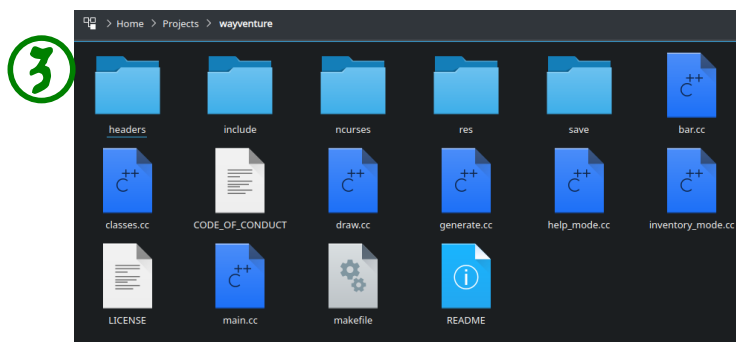

<https://github.com/epixinvites/wayventure.git>

2. Clone the Repository

① Click on the Source Control icon. Select Clone Repository.

② Paste the .git URL into the Command Palette and press Enter.

③ Choose where to keep the cloned repository. Once cloned, check your folder and you will see the files!
