# 1. Pick a Project

We shall use an open source project to practice cloning a git repository. If you have everything in place, you can even play this game!
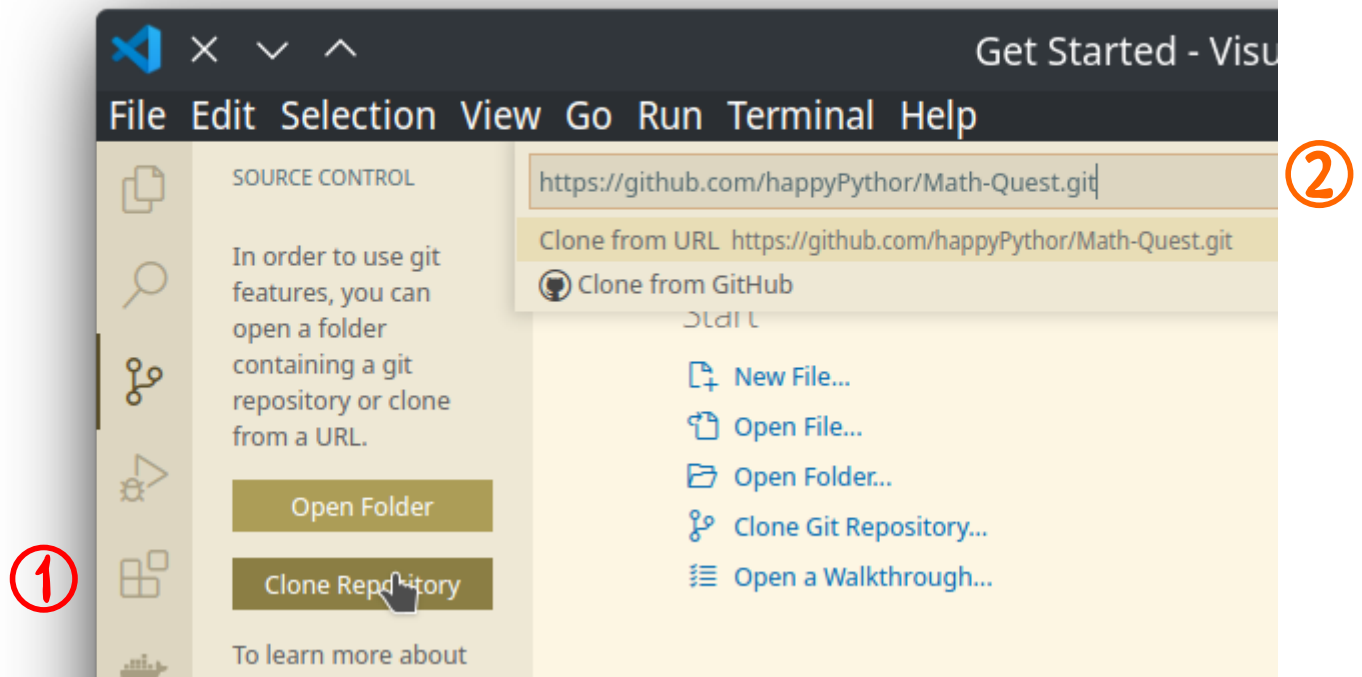

① Let's visit this project

https://github.com/happyPythor/Math-Quest

② Click on Code, and copy the URL from HTTPS
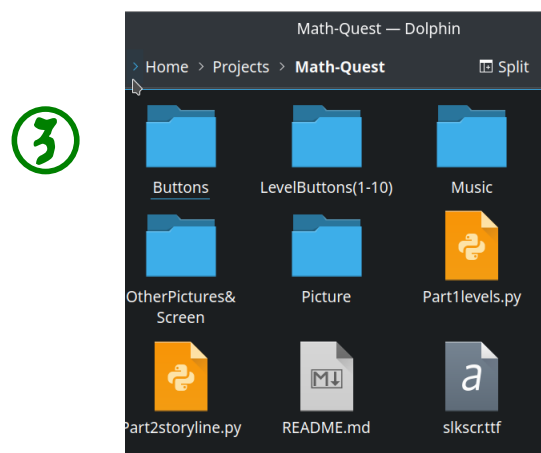

https://github.com/happyPythor/Math-Quest.git

2. Clone the Repository

① Click on the Source Control icon. Select Clone Repository.

② Paste the .git URL into the Command Palette and press Enter.

③ Choose where to keep the cloned repository. Once cloned, check your folder and you will see the files!
